SALES ANALYSIS FOR AN E-COMMERCE COMPANY

INTRODUCTION

This presentation analyzes customer, sales, shipment, & warehouse data for an e-commerce electronics company.

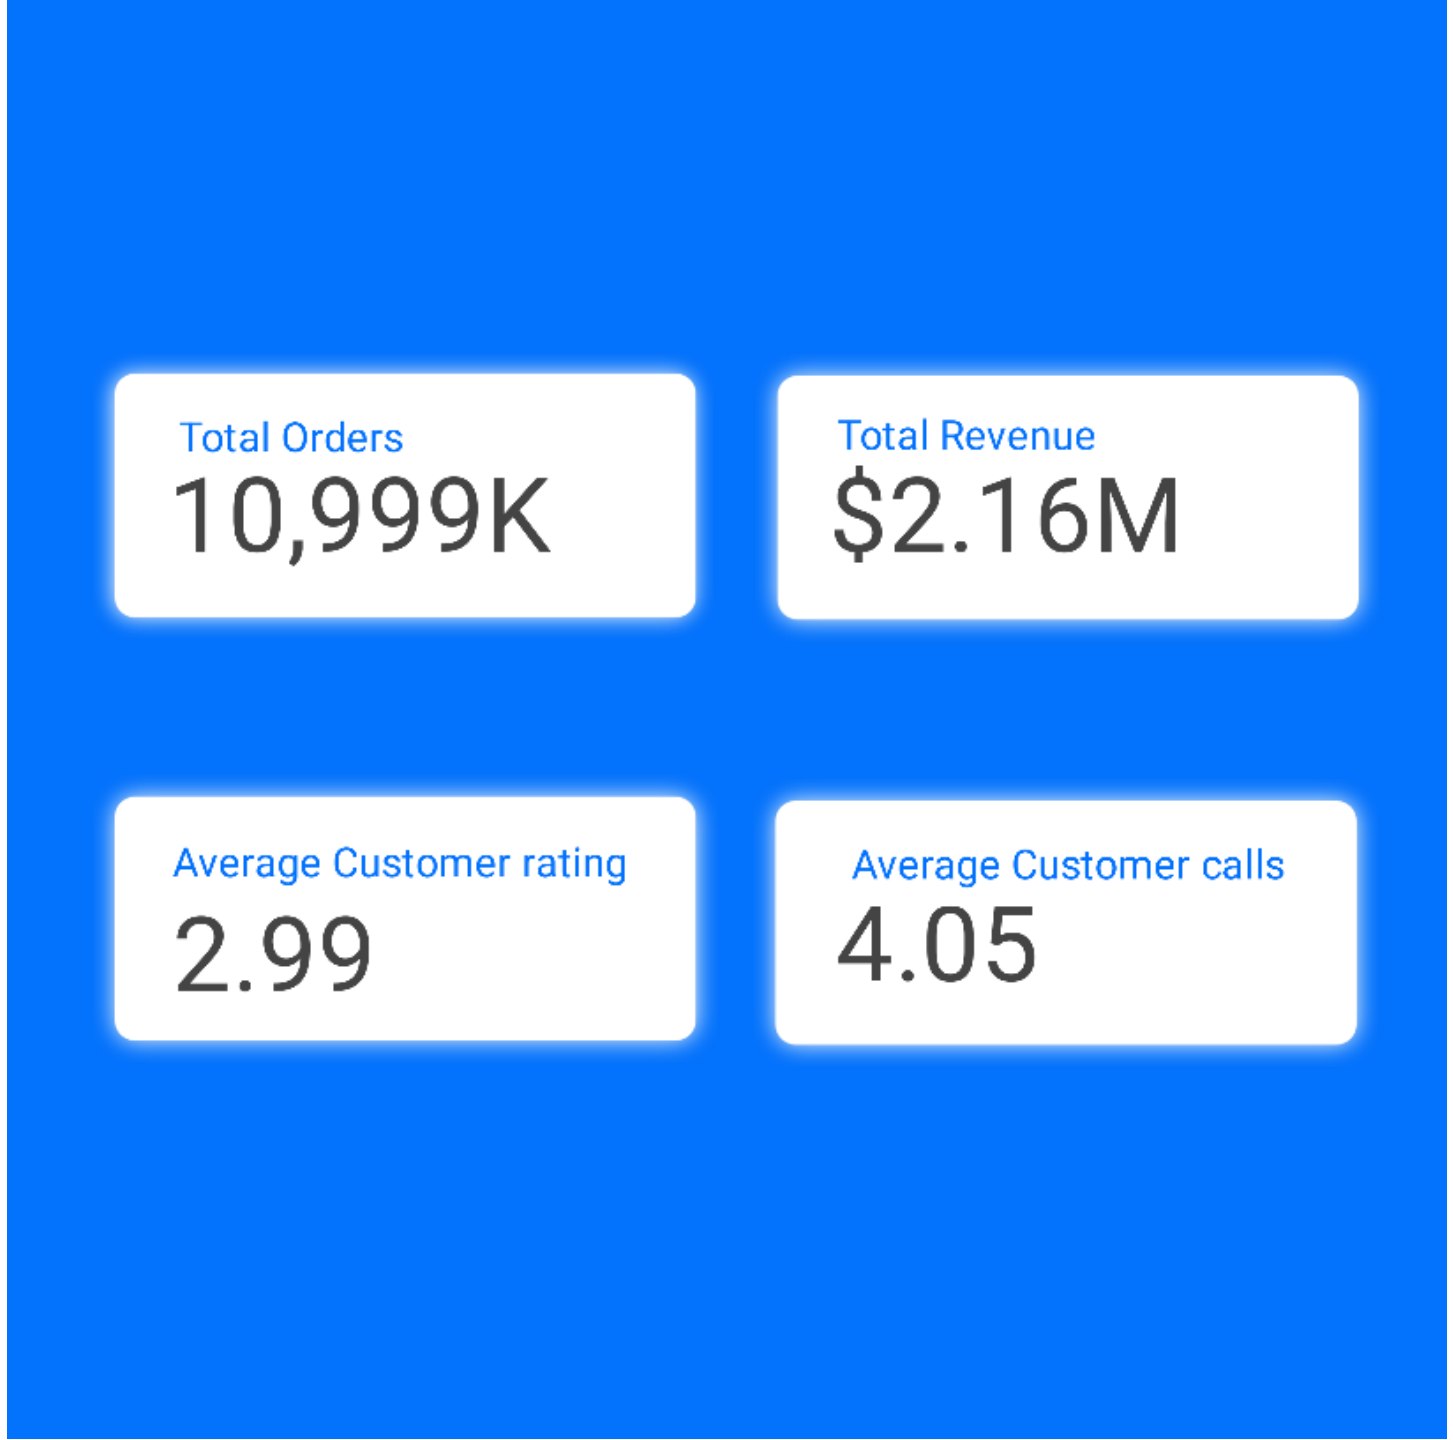

Throughout the Presentation we are going to be looking at details involving:

- Customer satisfaction
- Importance of products
- Preferred mode of shipment
- Promptness of shipment completion
- Warehouse block usage

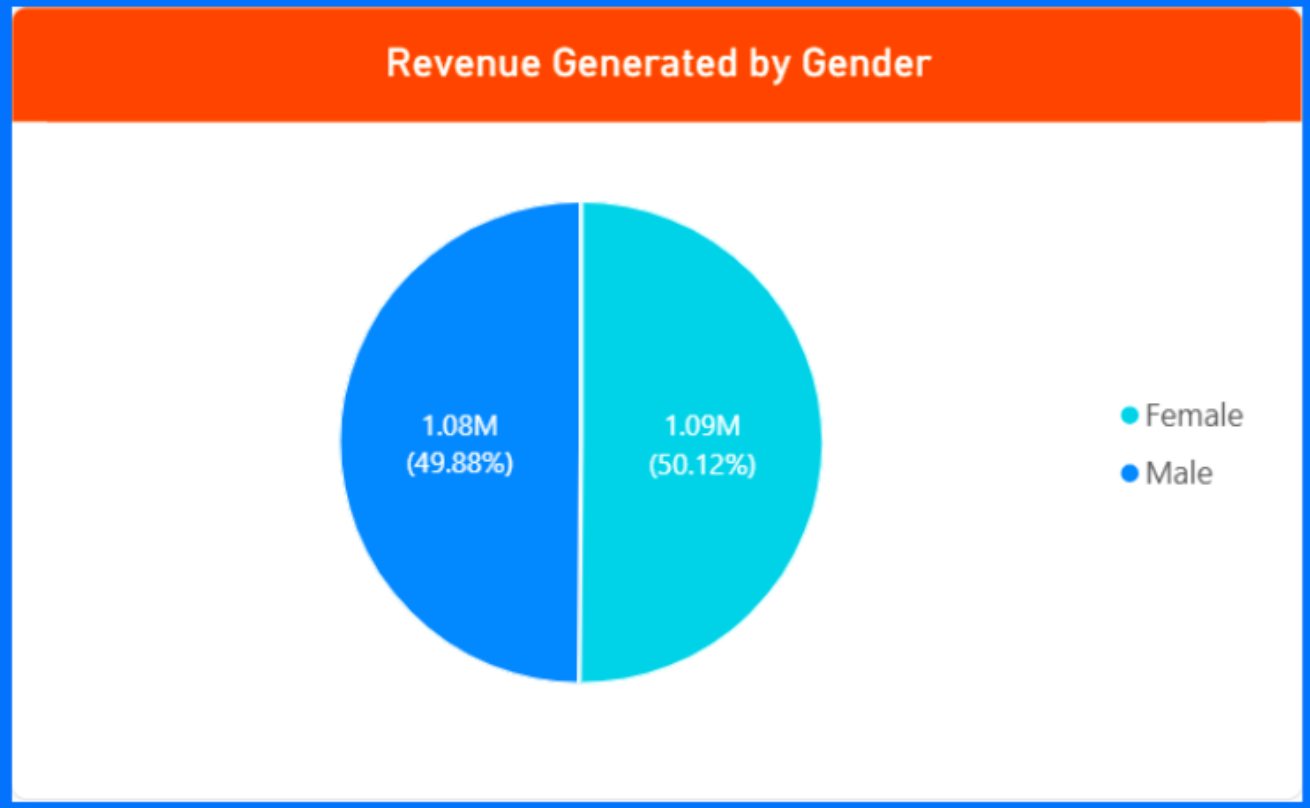

THE CUSTOMER DATABASE

The database contained information on:

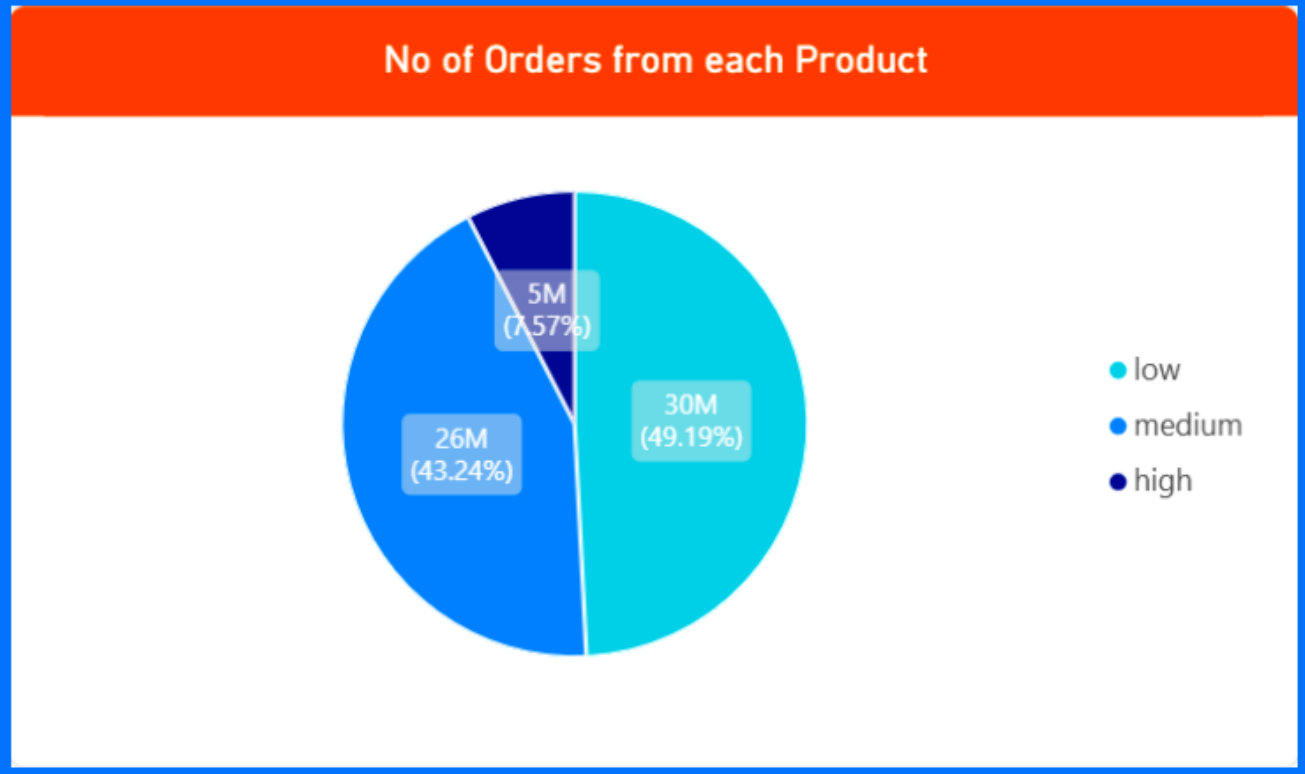

- Orders • Prior purchases • Customer ratings
- Customer care calls • Product importance
- Product cost, & • Mode of shipment

Total Orders
10,999K
Total Revenue
$2.16M
Average Customer rating
2.99
Average Customer calls
4.05

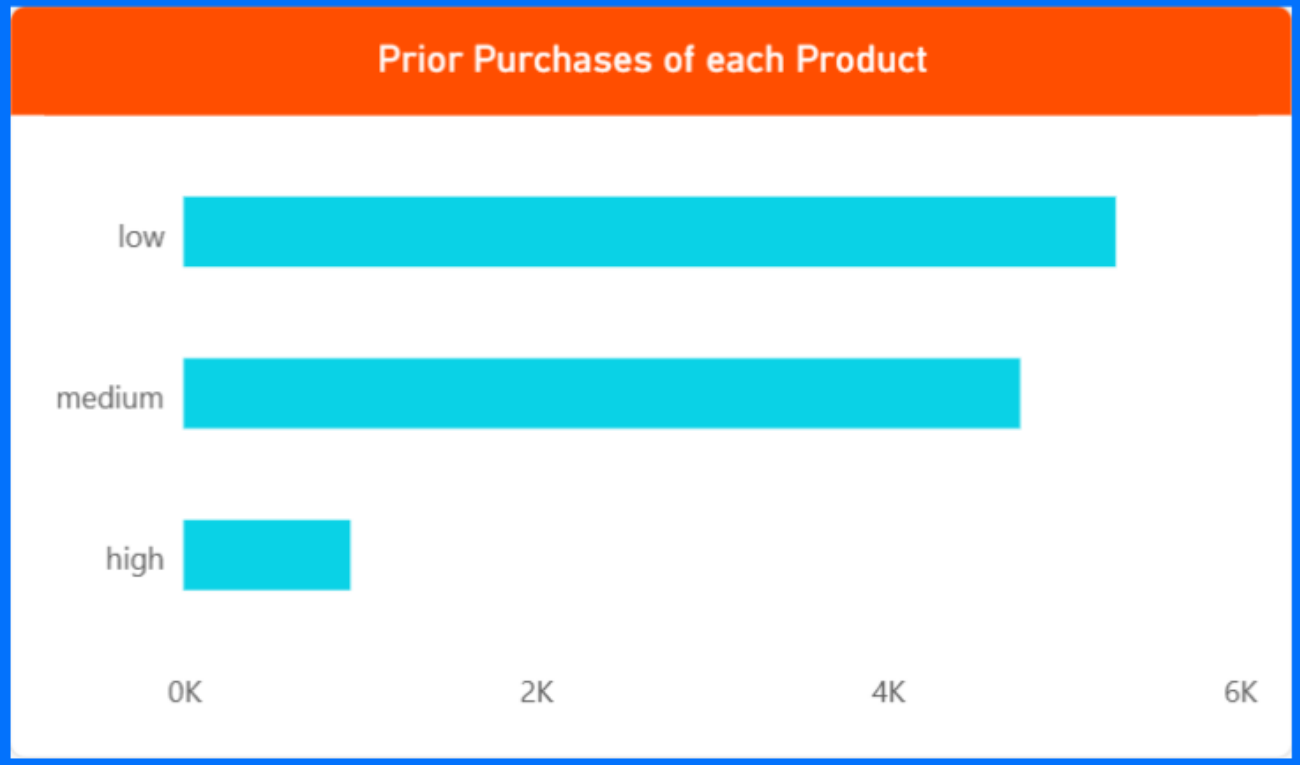

More Orders came from the Females.

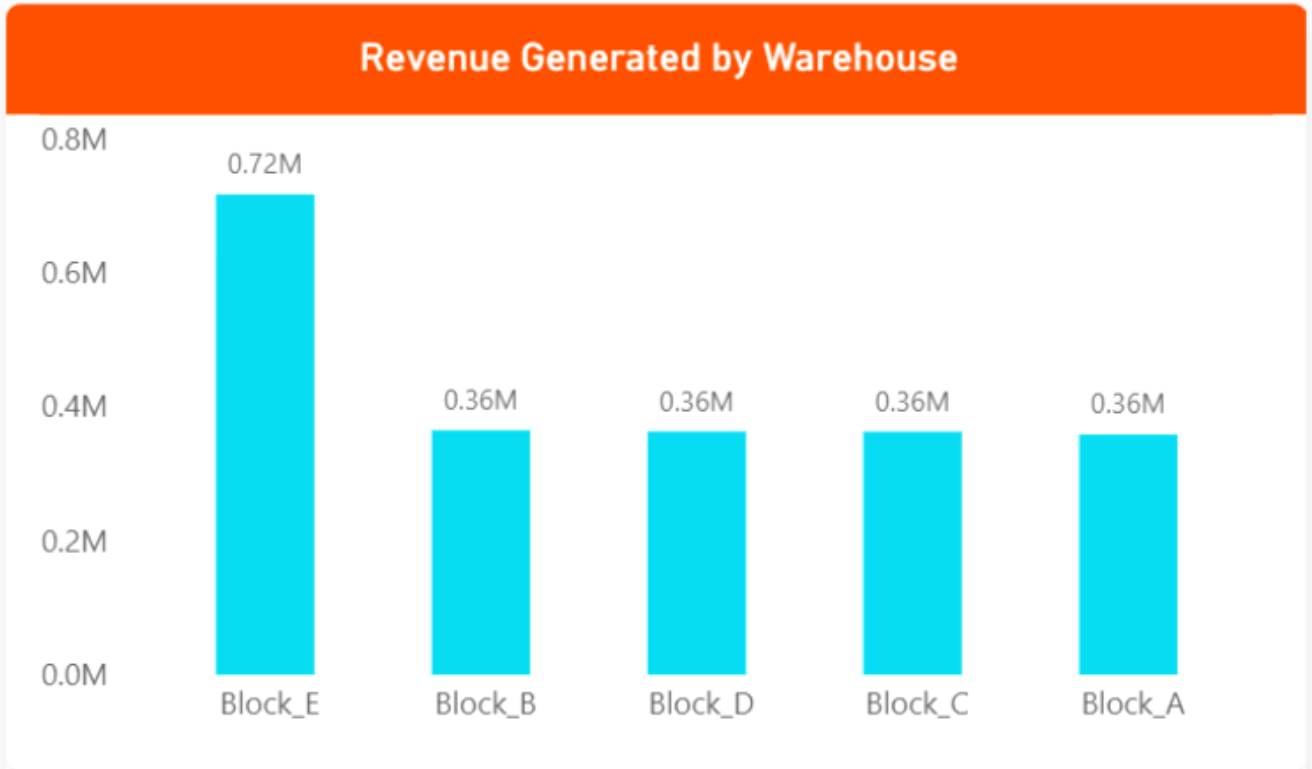

The low products were more purchased by Customers

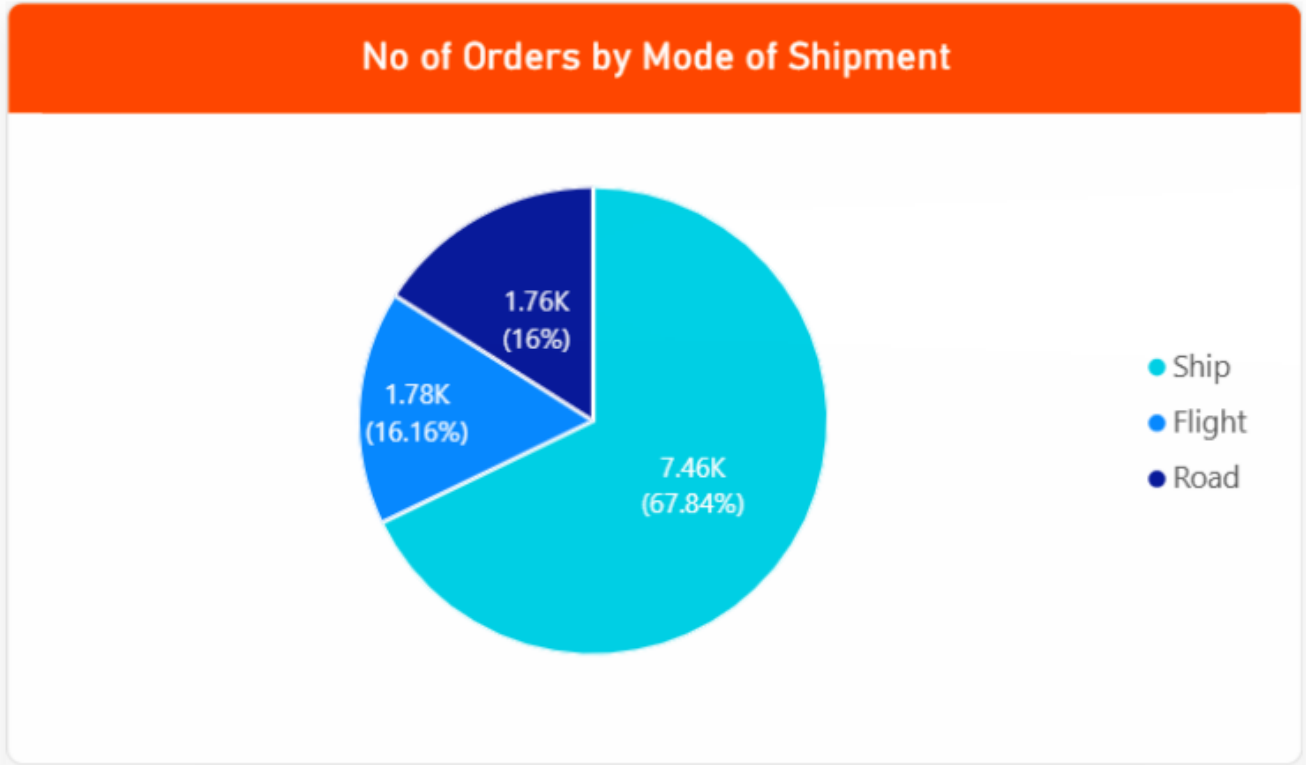

Looking at prior purchases alongside product importance, customers purchased more of the low products

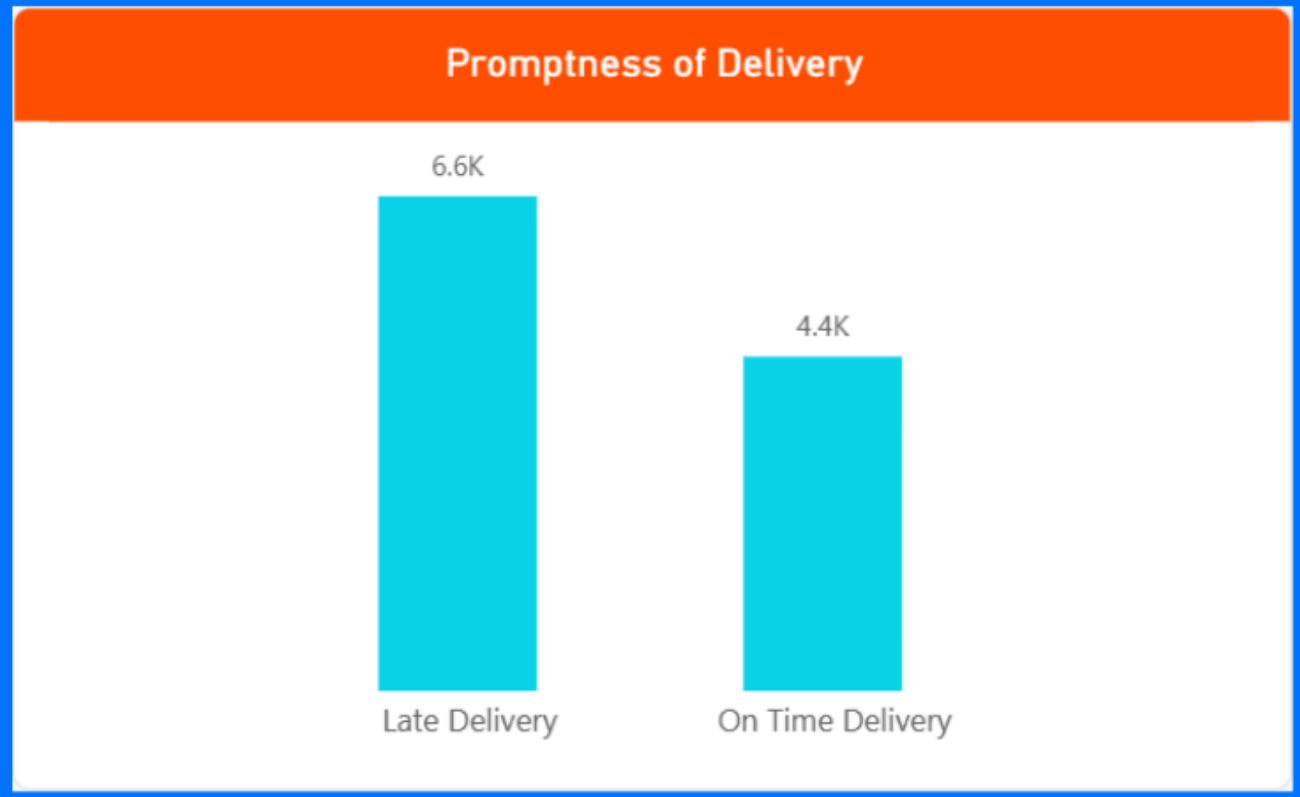

Block E recorded the highest number of orders among the five warehouse blocks.

Ship was the most commonly used mode of shipment among the three available modes: Ship, Flight, and Road.

We observed more late deliveries than on-time deliveries.

CONCLUSION
